Profile Summary:

Computer Engineering undergraduate with hands-on experience in web application development and basic network analysis. Familiar with tools like Nmap and Wireshark, and experienced in working with authentication and role-based access control systems.

Education:

B. Tech. in Computer Engineering (2nd Year)

2024-Present

D. Y. Patil College of Engineering, Akurdi

Expected Graduation: 2028

Skills:

- **Programming:** Python, C/C++, JavaScript
- **Web Technologies:** MERN stack (MongoDB, Express, React, Node.js)
- **Networking & Traffic Analysis:**
 1. Packet inspection using Wireshark (TCP handshake, DNS resolution, HTTP flows).
 2. Network scanning and service enumeration using Nmap (TCP SYN, version detection).
- **Offensive Security (Basic):**
 1. Reconnaissance and port scanning on lab environments.
 2. Basic vulnerability identification using Nmap scripts.
- **Security Tools:** Nmap, Wireshark, Burp-Suite (basic)
- **Other Tools:** Git/GitHub (version-control)
- **Systems:** Linux (Ubuntu, Kali, Parrot-Security), CLI-usage

Projects:

Hands-on Security Lab (Local VM Environment)

- Built a virtual lab using Kali Linux (attacker) and Ubuntu (targets) via QEMU/KVM
- Performed network reconnaissance using Nmap and identified open services.
- Captured and analyzed traffic using Wireshark to understand protocol behavior.
- Simulated basic attack scenarios (port scanning, service enumeration).

Kisan-Grahaak-Bazar — Full Stack Application (MERN)

[GitHub](#)

- Built a multi-role web app (Farmer, Consumer, Admin) with JWT-based authentication and role-based access control to manage user sessions securely.
- Developed 5+ REST API modules for products, orders, and messaging, handling complete request-response flows across the system.
- Tested authentication and API endpoints directly (bypassing the frontend) to check for access control gaps and input handling issues.
